

Project Initialization and Planning Phase

Date	5 July 2026
Team ID	SWTID-2026-2638
Project Title	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to provide an AI-powered platform that helps borrowers manage debt, analyze financial health, and generate settlement strategies, improving financial decision-making, reducing stress, and supporting better debt recovery outcomes. Key features include AI-based financial analysis, settlement prediction, negotiation support, and automated letter generation.

Project Overview	
Objective	The primary objective is to build an AI-powered platform that analyzes financial health, predicts settlement options, and provides intelligent negotiation support to help users achieve debt relief.
Scope	The project includes user authentication, loan management, financial analysis, AI-based settlement prediction, negotiation letter generation, and a dashboard for tracking progress.
Problem Statement	
Description	Borrowers struggle with multiple debts, lack of financial guidance, high-interest rates, and limited negotiation support, leading to stress, poor financial health, and risk of default.
Impact	These challenges result in financial instability, damaged credit scores, increased collection calls, and limited options for effective debt relief, affecting both individuals and financial institutions.
Proposed Solution	
Approach	The platform leverages AI and machine learning to analyze financial data, predict settlement outcomes, suggest negotiation strategies, and generate personalized settlement letters.
Key Features	- AI-powered financial health analysis - Debt-to-income ratio and risk assessment - Settlement prediction and strategy recommendation - AI-based negotiation letter generation - Dashboard for tracking loans and settlements

	- Real-time decision-making for faster debt relief outcomes. - Continuous learning to adapt to changing financial behaviors and market conditions.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	NVIDIA RTX 3060 GPU, 8 Cores CPU
Memory	RAM specifications	16 GB
Storage	Disk space for data, models, and logs	512 GB SSD
Software		
Frameworks	Python frameworks	FastAPI (Backend), React.js (Frontend)
Libraries	Additional libraries	scikit-learn, pandas, numpy, matplotlib, seaborn, SQLAlchemy, Google Generative AI
Development Environment	IDE	VS Code, PyCharm, Jupyter Notebook
Data		
Data	Source, size, format	Kaggle dataset (Loan Prediction Dataset) – 614 records, CSV UCI dataset (Default of Credit Card Clients) – 690 records, CSV
